

The cost of sailing without a keel

Risk	Without a keel	With the Keel
Agent sprawl	Each vendor's agents answer from their own copy of the truth	Every agent registered, identified and routed through one gateway
Definition drift	Workday, payroll, Fabric and Box each define an eligible employee differently	One canonical definition; the others are generated from it
Audit exposure	Evidence rebuilt by hand before each CPEO, SOC or ESAC review	Evidence emitted continuously, each item tied to its rule
Vendor lock-in	Knowledge trapped in one product's format	Knowledge in open standards; any adapter replaceable within a quarter

Inside the Keel: five levels

Level	What it holds	Contract to its neighbours
L4 Enterprise	isp-core, SKOS vocabularies, ORSD templates, governance council	owl:imports federation; KGCL change records
Mediation holon	Mapping graph, identity and URI registry, harmonization, RAG anchors	Six correspondence types; lineage to every projection
L3 Gateway	5D context bundle, policy enforcement, MTBH circuit breaker, Simplex gate	Every agent call passes one policy decision point
L2 Domain holons	isp-pay, isp-ben, isp-comp, isp-tal, isp-tech, Client, Contractor	Sovereign: own ontology, agent, index and monitors
L1 Knowledge holons	One statute clause, plan provision or policy each	URI, SHACL-valid, KGCL-versioned, bound to its norm
