

W WHERE
jurisdictions, workshes,
client tenants

S WHO
clients, worksite employees, roles, agents

E WHAT
services, processes,
plans, benefits

THE NORTH STAR

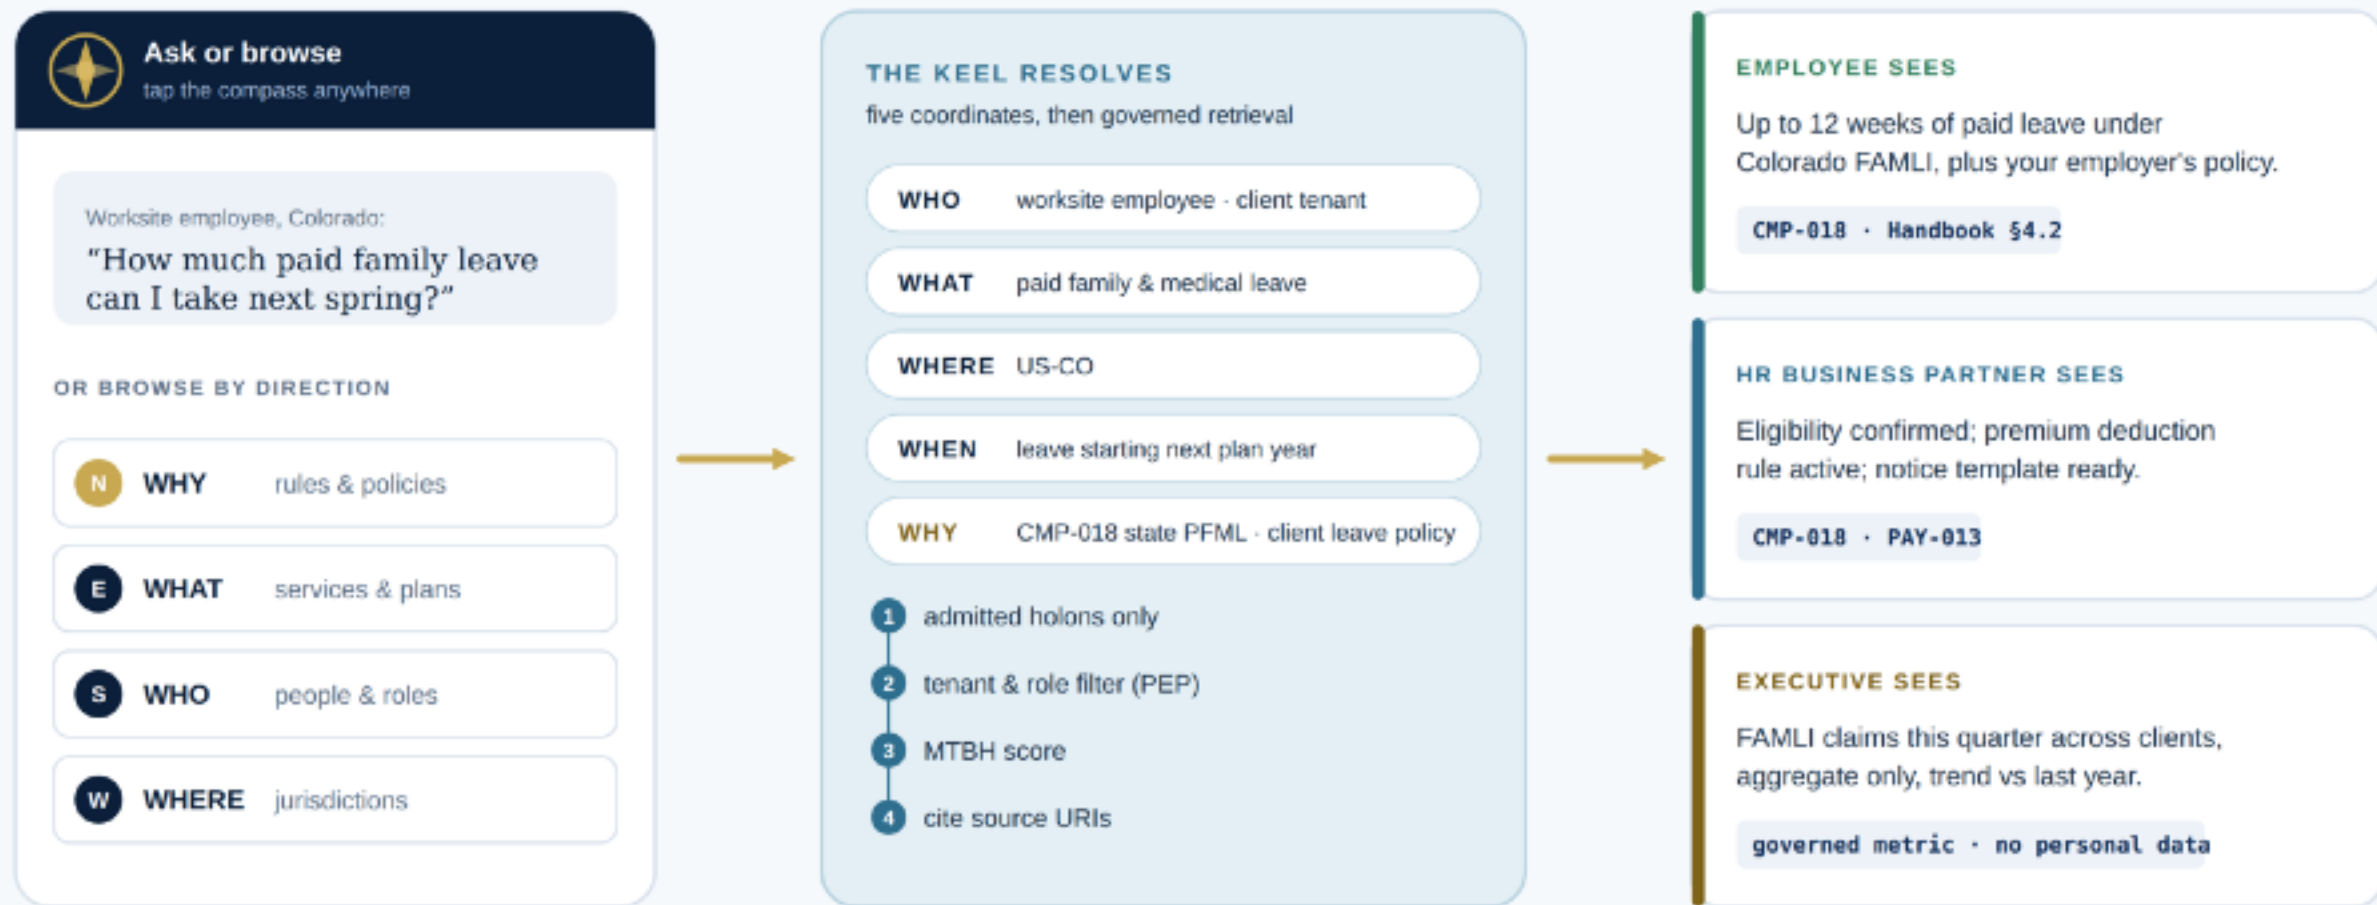

Every search starts at the compass.

The company's compass mark becomes the front door to everything it knows. Behind it, the holonic semantic layer resolves each question to five coordinates: the same 5D context the governance gateway enforces.

- ✦ **One index**
of admitted knowledge, each item anchored to a canonical URI
- ✦ **Shaped by who asks**
role and client tenant filter every result before it is shown
- ✦ **Always cited**
the rule, plan provision or policy behind each answer travels with it

Rings inside the rose are the holon levels a search walks: knowledge, domains, enterprise.

One question, one truth, shaped for whoever asks.

✦ Same question, same governed truth. Role and client tenant shape what is shown, and every answer carries its source.
