a Ikif:Obligation ;
Ikif:isSubjectTo "CA Labor Code §510" ;
isp-core:jurisdiction "US-CA" ;
isp-pay:dailyThresholdHours 8.0 ;
isp-pay:rateMultiplier 1.5 .
```

dbt / SQL · batch gross-to-net tests

OPA / Rego · sub-millisecond gateway policy

JSON Schema · Jarvis and agent constraints

Workday config · validations and conditions

Fabric IQ ontology · analytics and grounding

Every generated artifact carries the source shape URI, so a rejected timesheet points straight to its statute.

How North Star search works

1 Admit

Each item is classified, tagged with its client tenant and PII class, and SHACL-validated before it can be found.

2 Anchor

Each admitted item gets a canonical URI, linked to its rules, plans and jurisdictions.

3 Resolve

The question becomes five coordinates: WHO, WHAT, WHERE, WHEN, WHY.

4 Retrieve

Hybrid retrieval: SPARQL over the graph plus vector search, both keyed on URIs.

5 Filter

The policy enforcement point removes anything outside the asker's tenant or role.

6 Score and cite

MTBH scores the answer, uncertain ones go to a person, and every answer cites its sources.
