

THE SITUATION

The wind is already blowing

300K+

worksite employees
across thousands of client
companies

50+

states plus local
jurisdictions, each with its
own wage, leave and tax
rules

142

rules in the policy register
across five service
domains

4+

platforms with their own
definitions: Workday,
payroll, Microsoft 365,
Box

Every new platform and every new AI agent brings its own meaning for worker, client, plan and rule. Without a keel, that drift pushes the company sideways.

FOR BUSINESS EXECUTIVES

Three promises the Keel makes

One meaning

Worker, client, plan, jurisdiction and rule mean the same thing in Workday, payroll, Microsoft 365 and every agent.

Reports and AI answers stop disagreeing.

Author once, enforce everywhere

A law change is written once and compiled into every engine that runs the business.

Law change to production: weeks, then 48 hours.

Every answer traceable

Each payroll check, AI answer and agent action carries the rule and statute behind it.

Audit evidence assembled continuously.
