

The Value Jeffrey Brings to Insperity: Holonic Semantic Governance Architecture

A thin, standards-based governance layer that sits above Insperity's HR, compliance, and analytics systems — giving every employee a governed personal model, every policy one enforceable source of truth, and every values and compliance signal a measurable, auditable trail from training through monitoring.

ENGINEERING DISCIPLINES WOVEN IN

Systems & Ontology Eng.

Personal models: one governed profile per employee & role

Semantic Engineering

One formal meaning per HR & compliance term

Data Engineering

Versioned, queryable people & policy graph

Policy & Rules Eng.

SHACL/SWRL SSOT for rules, constraints & logic

AI / ML Engineering

Values & compliance models trained & monitored

Values & Ethics Eng.

Values alignment held to a measurable standard

Risk & Compliance Eng.

HR & employment-law obligations enforced continuously

Human Factors Eng.

Training effectiveness & values calibration tracked

WHAT THIS BUILDS AT INSPERITY

Personal Models

A governed semantic profile per employee — role, competencies, values alignment & compliance state — modeled with the same rigor as any other domain entity.

Values Training & Monitoring

Values training encoded as an explicit, versioned rule set — measured and calibrated continuously, not asserted once at onboarding.

On-Demand Compliance Training

HR compliance training triggered and monitored automatically against the SSOT rule library, not batched to an annual cycle.

Publishing to Analytics & Insights

Rules, constraints & logic compiled once and published into analytics/insights systems, so every dashboard draws from the same enforced definitions.

CAPABILITIES DELIVERED

Single source of truth for policy

One rule library enforced everywhere, not five HR systems quietly disagreeing.

Continuous values measurement

Values scored and monitored like any other trust signal, not a one-time course.

Personal-model-driven compliance

Each employee's compliance & training state is a governed, queryable model.

Faster, auditable compliance response

Training triggers automatically when a rule changes, with a full audit trail.

Analytics you can trust

Every insights dashboard consumes the same governed definitions.

Governance that scales with the business

New HR domains onboard onto an existing governed structure, not a bespoke build.
